

Feedback from the NCER Annual Members Meeting development session

Delegates were polled and with the question ‘What could be added to the Nexus/Perspective Lite offering that would make the biggest difference to your LA?’

Many responses involved new functionality and those will be taken forward for consideration, but some responses were asking for functionality that already exists in Nexus.

You said	Nexus already offers
Would it be a possibility at some point to have grades 7-9 added to the KS4 Grade Summary by Subject report in Nova? Many thanks.	This report already shows grades 7, 8 and 9
For me it's the integration of Wonde data and it being backed-up by buy-in from all LAs	Wonde attendance data integration is coming in Autumn 2025. We strongly encourage each LA to participate in this and to realise the benefits – particularly for your virtual school – of other LAs doing the same
Calculation of All SEN for analysis - combining SEN E and SEN K characteristic groups. Calculating this for attainment data for all schools take a lot of time	This is available within Nova reports by selecting the SEN Support and EHCP groups together within report parameters. Within Insight you can select the ‘SEN Support & EHCP’ options in a number of places such as Pupil Groups and Insight Tables
Some of the insight pages for example the NCY breakdown you can only export school level if we could have that pupil level would be good as we were asked for NCY breakdown by SEN kids recently	You can already access Insight pages either at LA or school level (thus enabling pupil exports when working at the pupil level. By default LA users see the full LA, but like a school through Perspective Lite you can opt to select the school level and then the particular school you wish to review. Once in that view, you can download pupil level information
Easy export of school level data, that is all schools listed in excel spreadsheet	If referring to attainment results for those schools, this can be done through the Insight Tables functionality already in Nexus
The ability to download some of the Nova reports for example results aggregated by school in a more excel friendly way so they can be manipulated etc	Insight Tables functionality is designed to provide you with the ability to easily download tables of data at the school level (or higher) and pick your own measures etc.

	Nova itself is not designed for that sort of manipulation, however the steps needed to quickly turn the excel export into something useful are provided HERE
EM 9-4 data for LAC/CIN children	Basics 9-4 (English and Maths) is available in KS4 Trend reports for both CIN and CLA cohorts through Nova. (Basics 9-5 is also available in those reports and more widely.)
